What we do ...

Eventhough it might appear stupid. This script enables you to show Latex-Beamer slides with JessyInk, by turning them into a layered Inkscape-SVG.

But Why?

- ① You want them to be shown in a browser
- ② You want to combine different slidesets, some being SVG other pdf
- ③ You want to zoom-around on latex-beamer slides.

Howto

- ① make sure pdf2svg is installed (and in the path)
- ② run “layerup.py” Your.pdf
- ③ load resulting LayeredUp.svg in Inkscape
- ④ use Inkscape to install JessyInk in the file and save
- ⑤ open in browser
